SUMMARY

Spatial Data Science student at the University of Oregon with experience applying GIS to environmental, community, and planning questions. Interested in using spatial data to understand how environmental and community conditions affect people and places, with experience in spatial analysis, mapping, and communicating GIS concepts.

EDUCATION

B.S. Spatial Data Science - University of Oregon

Expected June 2027

Relevant Courses: GIScience, GIS in Urban Planning, Principles of Data Science I-II, Social Science Research Methods, Earth Resources

PROFESSIONAL EXPERIENCE

GIS Peer Consultant - University of Oregon Libraries - Eugene, OR

Oct. 2026 - Present

- Provide one-on-one support for GIS coursework and projects, including spatial analysis, data management, map design, and technical troubleshooting.
- Guide students through GIS concepts and workflows across different software and tools, adapting support to their experience and project needs.
- Assist with finding and evaluating spatial data and choosing appropriate methods for analysis and visualization.

Medicare Actuarial Intern - PacificSource Health Plans - Springfield, OR

June 2025 - Sep. 2025

- Analyzed Medicare claims, enrollment, and cost data in SAS and Excel to identify utilization and financial trends.
- Cleaned, validated, and organized large healthcare datasets and prepared analysis results for internal reporting.

Community Ambassador - B.HOM Student Living - Eugene, OR

Dec. 2024 - June 2025

- Managed resident and prospective-resident communications, serving as a point of contact between residents, staff, and the community.
- Created digital materials and co-managed social media content for events, programs, and resident engagement.

PROJECTS

• Navigation Center Site Selection

Used parcel constraints and spatial analysis to narrow potential navigation center sites and compare them based on access, nearby services, and surrounding community factors.

• Elderly Population & Community Access

Mapped Eugene neighborhoods with higher concentrations of adults 65+ and used spatial analysis to examine their access to transit, parks, and community resources.

• Wolverine Habitat Suitability Analysis

Used raster reclassification and suitability criteria to identify potential high-quality wolverine denning areas, then applied terrain and viewshed analysis to evaluate the results.

SKILLS

- **GIS:** ArcGIS Pro, ArcGIS Online, spatial analysis, raster analysis, suitability modeling, cartography
- **Professional:** communication, visual presentation, attention to detail, project organization

INTERESTS

Environment · Urban planning · Graphic design · Reading · Roller skating · Fitness
